Introducing WIN-PAK® SE with VISTA Integration

Looking to go beyond traditional security? Honeywell's popular VISTA intrusion system now integrates seamlessly with our video and access control products—letting your customers expand their systems while letting you expand your business. Isn't it time you unlocked the possibilities?

Smart Business For You...

Designed for the profitable medium to large size business market, Honeywell's exciting new WIN-PAK SE with VISTA lets you quickly and easily add video surveillance and access control every time you install a VISTA commercial security system—all from a single user interface.

The result? A single solution powerful enough to handle all of your customers' integrated security requirements! By meeting your customers' intrusion, video and access control needs precisely, you're more likely to solve their problems in a cost-effective way—differentiating your business and closing more sales. What's more, the unique combination of intrusion, video and access control in one saves time and money by reducing training and labor.

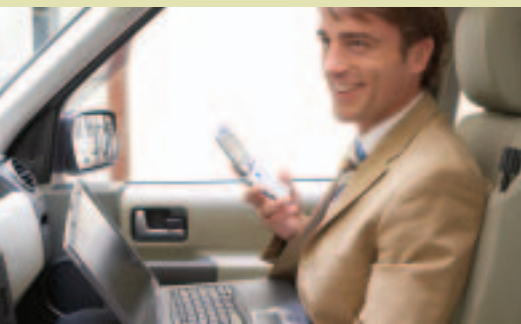

...Smart Solutions for Your Customers

WIN-PAK SE actually lets you help your customers intelligently manage their business. They can:

- Save time and money by managing three separate systems through one easy-to-use software interface
- View and control the security of their businesses remotely
- Display real time video with access and intrusion events
- Improve the level of security by eliminating user code sharing
- Save money on lockset replacement every time an employee leaves the organization
- Enable access control with a single swipe—no need to remember codes or provide keys that get lost or stolen
- Track employee door entry, time and attendance
- Reduce shrinkage and false alarms
- Restrict access based on job function, time or location
- Protect valuable assets by restricting access to specified areas like stock rooms, offices, vaults and safes, computer closets and more
- Increase employee safety by limiting unauthorized use of equipment or machinery in industrial applications
- Control and/or restrict personnel and visitor traffic
- Incorporate elevator, parking and driveway access control and driver tracking

Video Surveillance... a Whole New Way to Look at Security

Your customers can view cameras around their businesses and control the system while on the premises, on the road or remotely from their homes.

Get the whole picture! With WIN-PAK® SE, your customers can enjoy the benefits of integrated video surveillance for an even higher level of security.

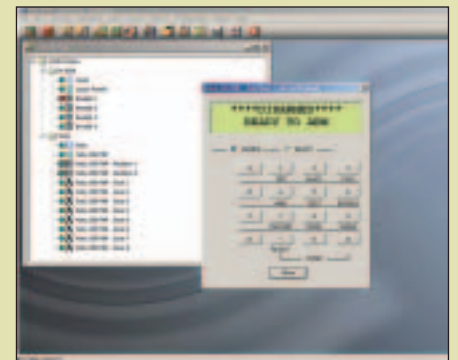

Your customers can:

- View video at the touch of a button in and around their business right at the video monitor via the IT network or remotely over the Internet
- Check on stock rooms or view lobby entrances
- View delivery docks and parking lots
- Screen visitors at the entranceway
- Keep their eye on valuable assets, inventory and important records
- View recorded video to check on openings and closings of their business
- Conduct and view secure guard tours
- Schedule “live” site visits that are conducted electronically while the system simultaneously records video in time lapse mode—granting them instant access to, and easy search and retrieval of, important information

Access the Possibilities... Access Control Made Simple

Simply placing an access proximity card near the reader will quickly and easily give access only to those specified. This card can also be used to disarm or arm the security system. There is no need to fumble with clumsy locks and keys or have employees remember multiple security codes. If a card is lost or stolen, it can be deleted from the system without having to redistribute keys or change locks—saving time and money.

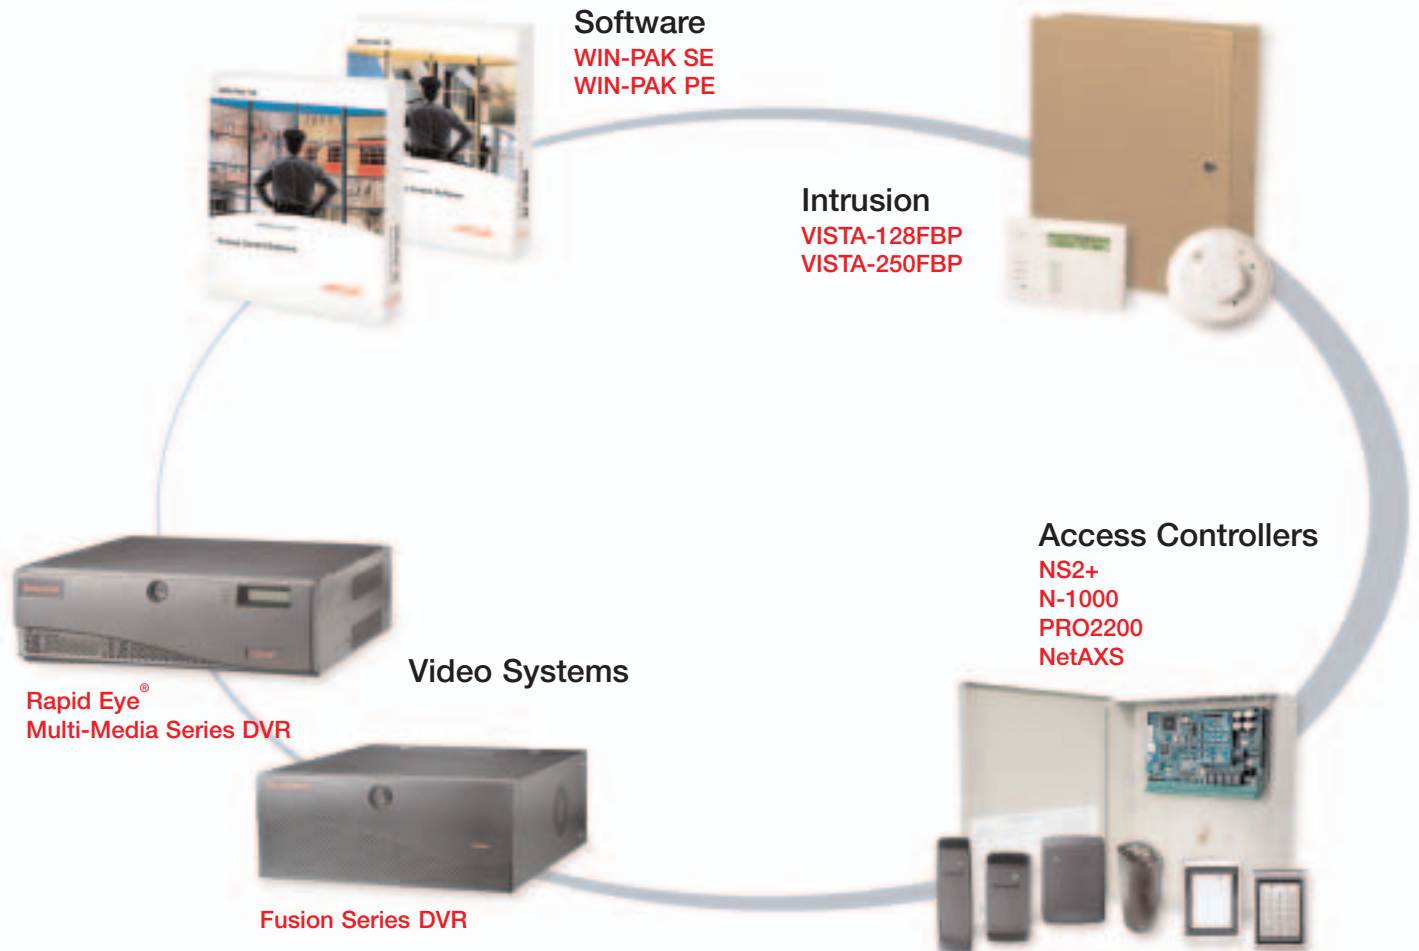

WIN-PAK SE's virtual keypad enables quick and easy remote control of intrusion panels.

How it Works

WIN-PAK® SE Combines Access, Video, Intrusion and Fire

Compatible Systems

A Winning Opportunity

From Retrofits to Future Expansions

WIN-PAK SE gives you the flexibility to create a customized and scalable intrusion, video and access control solution to meet your customers' needs. Whether it's a new installation, a retrofit or an expansion, WIN-PAK SE delivers!

Differentiate Your Business

Offering valuable video surveillance and access control management can dramatically differentiate your business from those only offering traditional intrusion.

WIN-PAK SE...a Winning Opportunity from Honeywell

Whether you've installed video and access control for years or you're considering it for the very first time, you'll find that WIN-PAK SE with VISTA offers you exactly what you're looking for—an incredible new opportunity to provide customized security solutions that use your existing skills and knowledge, simplified installations and convenient features that generate more sales. Both you and your customers win!
